

*The control IT needs,  
the convenience  
users expect.*

#### **Centralized User Management:**

Control access at every level, from a secure Admin Console, with central deployment & management of users.

#### **Directory Integration:**

Leverage existing systems & automate group management through Active Directory Integration, LDAP, & custom APIs.

#### **SAML Single Sign-On:**

Lower the number of passwords your company relies on with SAML 2.0 to securely transmit user access & provisioning data.

#### **Team Password Sharing:**

Easily manage shared logins with customized permissions, inside & outside the office, without losing accountability.

#### **Compliance Reporting:**

Maintain accountability & compliance with automated, detailed reporting logs. Plus, see who may be putting the organization at risk.

#### **Configurable Security Policies:**

Set and enforce the standard for your company's unique environment & security needs with over 80 configurable policies.

#### **Universal Access:**

Work anywhere with real-time sync for desktop, laptop, mobile or web. Truly adaptable for BYOD & virtual employees.

# EVERY LOGIN, MANAGED.

LastPass Enterprise simplifies access management for companies of every size, with the tools your entire organization needs to secure your business and centralize control of employee passwords and apps.

#### **A true Single Sign-On solution**

Eliminate dangerous password habits in the workplace while giving your employees what they really want: One password to remember. LastPass Enterprise offers a truly integrated access management solution, elegantly blending web apps that handle SAML SSO and those that don't support federation, for a seamless user experience. Employees love the one-click access to all their apps, websites, and services, with their own secure vault to easily manage and encrypt every password.

#### **Automated team password management**

LastPass Enterprise empowers your business to enforce a strong password policy and streamline admin control, so you can reduce risk across your entire organization while boosting employee productivity. With features like automated password storage, password autofill, a password generator, Secure Notes, and Shared Folders for easy password sharing, LastPass Enterprise gives employees everything they need to practice secure password management. Plus, IT admins have centralized oversight to enforce security policies, track usage, and manage users.

#### **Designed for security**

We're uncompromising when it comes to data security. LastPass uses leading technologies to safeguard data and protect user privacy, with AES 256-bit encryption and salted hashing to provide complete security in the cloud. User data is encrypted and decrypted at the device level, so that the master password – and the passwords stored in your vault – are kept secret, even from LastPass. Plus, you can augment security in your organization with two-factor authentication for LastPass accounts.
